

## Rack-N-Bag Instruction Sheet

Thanks for purchasing our products. Each Rack-N-Bag is hand built in the USA.

Your mixer/recorder is held in by compression. Install the included adhesive rubber bumpers at each corner on both sides of your recorder mixer. The height between the carbon fiber tiers have been set at the factory for your particular device. A height reconfiguration kit is available to change the tier heights to accommodate different devices.

Apply adhesive rubber feet to each corner on both sides of device

Loosen the 4 nuts at the bottom of the Rack-N-Bag. You can then install and position your device. Use an 8mm or 5/16" nut driver.

The handle is released with a button on the back side of the tube. Press the button and slide out the end section.

When re-installing the handle listen for a click to make sure the lock is engaged. Check by pulling on the slide out end to make sure the lock is engaged. The lock can be a little stiff when new and will snap in place more readily after a few cycles.
